

St. Andrew's Health Center continues to diligently monitor the ever-changing rules, regulations and guidelines regarding COVID-19.

We have designated a Respiratory Clinic for those in need of COVID-19 screening or care for respiratory symptoms. If you are in need of a screening for Covid-19, please call the clinic or hospital PRIOR to presenting to either facility at 228-9300 or 228-9400. We follow the prescribed guidelines from the North Dakota Department of Health in regards to who receives a COVID-19 test. The Clinic continues to provide care to the community for non-infectious patients needing non emergent medical attention. Please know that routine visits will be canceled until further notice to help serve the community and follow guidelines.

If you are in need of a medication refill, please call your pharmacy.

To continue our top quality patient care, we have enacted respiratory precautions within the hospital for our patients. We have a designated respiratory wing in our hospital, which is separate from our swing-bed patients. SAHC is dedicated to patient care and is adapting quickly to our changing needs.

If you have an emergency situation, our EMERGENCY ROOM is always available to care for your acute needs.

Please follow CDC and NDDOH guidelines and help do your part for slowing the spread of COVID-19.

Thank you all.
